GCC LIBRARIES USED IN THIS PROJECT

Wherever possible we've written our own functions instead of using 'C' libraries.

The only libraries we've used are shown in this code:

```
global main
extern printf, scanf, malloc, free, rand, srand
```

Libraries such as strlen, strcpy and strcat we've written our own functions to carry this out. These functions will always run slower than the 'C' libraries, But it was fun writing our own functions in X86-64 assembly language!

UPDATE - AUG 2026
Since working on this project I included more C libraries, including math and regular expressions.
